

CLAIMS

1. Method of delivering goods or services to a user, such as a temporary authorization to park an automobile vehicle, by an automatic terminal (1), such as a parking voucher dispenser, characterized in that it comprises the following steps:

i) identification of the user by the terminal, and

ii) after identification of the user, automatic assignment by said terminal of particular conditions specific to the user for the delivery of goods or services.

2. Method according to claim 1, characterized in that said particular conditions relate more particularly to the price of and/or the method of payment for said goods or services.

3. Method according to either preceding claim, characterized in that said identification step consists in comparing identification data supplied by said user with identification data stored at least partially in said terminal (1).

4. Method according to claim 3, characterized in that the identification data stored in said terminal (1) is regularly downloaded from a remote server connected to said terminal (1) by an appropriate telecommunication network.

5. Method according to either claim 1 or claim 2, characterized in that said identification step consists in comparing identification data supplied by said user to identification data stored in a remote server to which said terminal (1) is connected by an appropriate telecommunication network.

6. Method according to any of claims 3 to 5, characterized in that said identification data supplied

by said user comprises the number of a payment card, said number being read by appropriate reading means of said terminal (1).

5       7. Method according to any of claims 3 to 6, characterized in that said identification data supplied by said user comprises a number communicated to said terminal (1) by said user by means of input means (2) of said terminal (1).

10       8. Method according to any of claims 3 to 7, characterized in that said identification data supplied by said user comprises the telephone number of said user.

15       9. Method according to any of claims 3 to 8, characterized in that said identification data supplied by said user comprises the number of an information medium uniquely identifying the user, such as a loyalty card, said number being read by appropriate reading means of said terminal (1).

20       10. Method according to any of claims 3 to 8, characterized in that said identification data comprises a password personal to said user.
